Sustainable Technology · Clinical Innovation · Ultimate Performance

Because every tissue donor is a hero ...

Introducing the EnviroSorb® Skin Reconstruction Pack: Your new tool for faster, more effective restoration, invented by a Certified Tissue Recovery Specialist

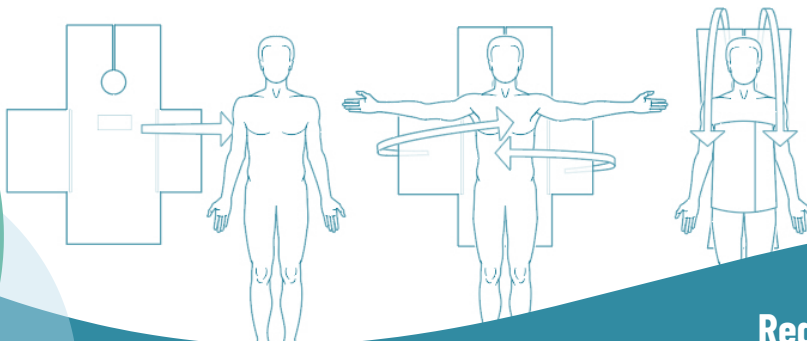

Discover the next generation of thoughtful restoration that honors both gift and donor.

EnviroSorb® Skin Reconstruction Pack makes restorations up to 50% faster than traditional prosthetics, suturing or towels/pads while providing absorbency and protection against leakage, odors and staining of the casket during transport.

EnviroSorb® Skin Reconstruction Pack is highly customizable using simple shears and tape ... and results in a natural presentation. Honor the gift, honor the donor.

The Science Behind the Solution

- ✓ **Advanced Technology:** Unique proprietary materials and innovative design saves time and improves natural presentation. Highly-customizable with a few simple cuts, strategic wrapping and tape, regardless of donor size, from 40 to 400 lbs. Dense, incredibly pliable material absorbs up to 4 gallons of fluid, neutralizes odors, and helps to block stains. Reinforced super-absorbent neck pad offers extra protection where needed most.
- ✓ **Inter-Facility Cooperation:** Allows tissue-banks to reduce burden on the funeral home, and provides funeral directors a new tool for natural final presentation, especially when combined with other LDI mortuary products like EnviroBones® prosthetics and patented Mort-Port™ Unionalls.
- ✓ **Eco-Friendly:** Latex-free, PVC-free, with low VOC emissions for crematorium compatibility. Made with 80% post-consumer recycled material. Prop 65 compliant.
